## Skin Rescue [Barrier]

Visibly and deeply repairs the  
skin's barrier function

Dermatologically tested on sensitive skin

THE BARRIER FUNCTION:

SITUATIONS THAT COMPROMISE THE BARRIER FUNCTION

01 INFLAMMATORY ALTERATIONS

- **Acne and Rosacea<sup>(1)</sup>:**  
Microbiota alteration
- **Periorifical and atopic dermatitis<sup>(2)</sup>:**  
Increase in pathogenic microbiota  
Chronic inflammation

02 MEDICAL-AESTHETIC PROCEDURES

[Non-invasive procedures alter the barrier function and cause inflammation]

LASER

- Epidermal ablation
- Inflamación

MICRONEEDLING & RADIOFRECUENCIA

- Microlesiones
- Inflammation

CHEMICAL PEEL

- Surface layer exfoliation

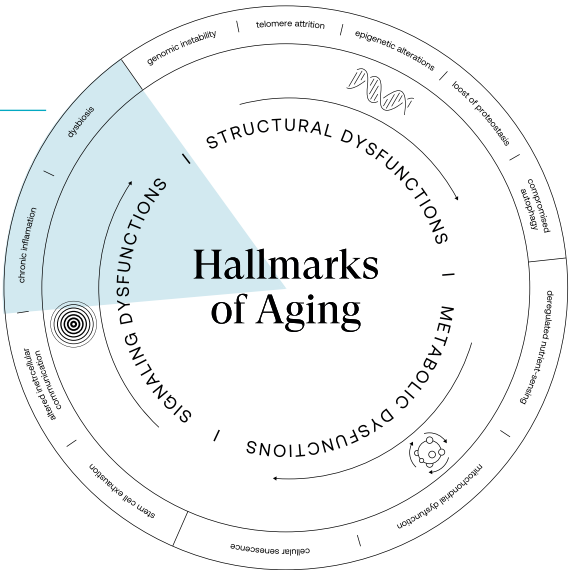

SKIN RESCUE [BARRIER]

Addresses barrier function restoration and signs of ageing with:

**Dysbiosis**  
This is an imbalance in the composition and function of the microbiota (a collection of microorganisms such as bacteria, fungi, and viruses).

**Chronic inflammation**  
It is a prolonged, low-grade immune response that can damage healthy tissue and is associated with the development of chronic diseases.

REBALANCES DYBSIOSIS

Alpha-glucan oligosaccharide (prebiotic)

CHRONIC INFLAMMATION SOOTHING ACTION ANTI-INFLAMMATORY EFFECT

Dipotassium glycyrrhizinate  
Vitamin E

STRUCTURAL DYSFUNCTION RECOVERY OF BARRIER INTEGRITY

5 ceramides (EOP, NS, NP, AS, AP)  
Shea butter  
Squalane  
Hyaluronic acid

MAIN ACTIVE INGREDIENTS:

SCIENTIFIC EVIDENCE IN MONOTHERAPY:

Bacterial genus	T0	T28	Absolute variation
Staphylococcus	1,23 %	2,53 %	+1,30 %
Corynebacterium	0,46 %	1,20 %	+0,74 %
Mycobacterium	4,75 %	1,75 %	-3,00 %
Acinetobacter	1,30 %	0,40%	-0,90 %

Changes in the relative abundance of skin bacteria after 28 days of use<sup>(4)</sup>

● Beneficial Microbiota ● Potentially Pathogenic Microbiota

MOISTURISING ACTION<sup>(4)</sup>

+39%  
HYDRATION  
in 30 min

SOOTHING ACTION  
IMMEDIATE<sup>(5)</sup>

NON COMEDOGENIC<sup>(6)</sup>

VISIBLE AND DEEP RECOVERY OF THE SKIN BARRIER<sup>(4)</sup>

(4). Clinical study in 32 women (aged 22–45; mean age 35.91 ± 5.54 years) with sensitive skin, TEWL ≥ 15 g/h·m2 and corneal moisture ≤ 50 conductance.  
(5). Clinical study (stinging test) conducted on 20 volunteers aged 20 to 83 with dry, normal, combination and oily skin.  
(6). Clinical evaluation with 25 volunteers aged 18 to 70 years.

# EVIDENCE OF IMMEDIATE REPAIR IN COMBINATION THERAPY

## NON-ABLATIVE LASER:

IMMEDIATE AND LASTING  
SOOTHING ACTION  
(more than 6 hours of relief)

Clinical and instrumental evaluation in 20 volunteers, aged between 25 and 45, with no skin conditions.

## JESSNER PEEL:

RESTORATIVE ACTION ON  
THE BARRIER FUNCTION

-27,2%  
TEWL  
24h

Clinical and instrumental evaluation in 30 volunteers over the age of 18 with sensitive skin (prone to atopy, type I rosacea, mild or reactive erythema, treated with Jessner's peel).
